- Ideal for small or medium rooms only.

Different Types of Room Heaters Available in The Market

If you are looking for buying the, you need to be aware of the different types of such products available in the market. People of India believe in buying quality products over anything else for which the manufacturers have some diverse options for them to choose.

Different types of room heaters adapt different operational functionality but serve the same purpose of keeping the room warm during the cold climate. Therefore, to give the Indian citizens liable options, here are some of the room heater types available in the market that are different in prices, functionality and design:

- **Convection Room Heaters**

The convection room heaters are one of the most commonly used types amongst all. It is usually filled with heat transfer oil. The inclusion of heat transfer oil makes it able to radiate heat from the external surface area.

There is a thermostat embedded within the convection room heaters that are used for regulating the heat as per the requirement. Convection type heater products are considered one of the **best room heaters in India** that require less maintenance over time and require no cleaning at regular intervals.

Another positive thing about the convection room heaters is that they do not demand refilling of the heat transfer oil in their lifetime. Moreover, it takes a little more time for spreading the heat around the room as it does not come with a blower.

It is true that they have a great coverage area, but the spreading speed is slow. The pricing for the convection room heaters in India is quite less for which people who have a low budget prefer this over other options.

- **Radiant or Infrared Room Heaters**

The infrared rays implemented onto the heating technology results in the manufacturing of the **best room heaters in India** with low power consumption. The radiant room heaters are embedded with infrared technology to offer instant heat.

It is the **best room heater with low power consumption** attributes. They offer direct heat, and the operations are silent to give you a peaceful sleep at night without the constant buzzing sound. The look of the infrared heaters is also elegant as some of them come in a wooden cabinet design to give you a look similar to that of wooden furniture in the house.

Hence, you can easily add it onto your room décor collections as it would not bother you with its presence as an appliance but would rather look like furniture that is doing its job. So, if you are

looking for **best room heaters in India** that can help you provide instant heat effect and an appealing look, radiant and infrared heaters are ideal for the purpose.

- **Ceramic Fan-Forced Room Heaters**

Amongst all the other types of room heaters, the title of **best electric room heater** is earned by the Ceramic Fan-Forced Room Heaters. If you are planning on getting a versatile room heater that can provide you with some ideal operating options, then this heater type can be your best bet.

Some of the basic features that this type of electric room heater possesses are remote control functionality, oscillation, fan settings, thermostats and much more. The major perk of using these **best room heaters in India** is that you get to use them in almost every room or premises.

You can use them in your living room, bedroom, dining room and you can even take it to your office. Moreover, it is a safer option when there are kids and pets around as touching it is not lethal while it is turned on. The heat spreading capability is also high with these room heaters.

- **Micathermic Panel Room Heaters**

Micathermic Panel Room Heaters is one of the unique types of heater that comes with hybrid technology. These types of heaters usually release 20% radiant heat, whereas 80% of convection heat, which makes it an effective remedy.

These are also considered one of the **best room heaters in India** that are slightly expensive but are worth the money spent. They are light in weight, and some of the heaters also have grooves for wall mounting.

They have a silent operation but gets really hot over time. So, if you have kids and pets in your house, you are recommended to place it somewhere where the kids or pets cannot reach. It would be better if you mount in on the higher walls.

Key Features Or Factors to Consider When Buying Room Heater

As stated earlier, Indians love to buy only the best and to help them find, there are top 8 products listed above-shortlisted post analysis and comparison amongst the best. There are many top brands that are offering the **best room heaters in India**. But you need to buy one amongst them, and it needs to be the best.

Therefore, here are some of the factors or features that you need to consider before you make your decision on buying one amongst the best eight-room heaters listed above in this article.

- **Temperature Options-** the room heater that has diverse heat settings in terms of temperature control are usually better options than the ones that have one or two options. Check out for the product from the above list that has multiple temperature setting options to meet your requirements.
- **Illumination or Light-** Some of the room heaters put up a bright light that illuminates the entire room and disturbs the sleep at night. Therefore, choose the ideal one that has less lighting hassle while heating the room to give you a peaceful sleep with a warm surrounding.
- **Grill for Safety-** It is one of the most important consideration if you have pets and kids in your house. The top brands install an additional safety grill onto the room heaters to avoid accidental burn due to the heating element.
- **Wattage-** If you are looking for buying the **best room heater with low power consumption**, then you need to check on the wattage specification for getting a better idea about its energy consumption. The best brands come up with energy ratings to ensure power-saving perks.
- **Heating Elements-** Check for the number of heating elements present in the room heater you purchase as more the elements, better will be the output. It is efficient as more heating elements would eventually heat the room faster to your desired temperature.
- **Auto Cut-off-** Auto cut-off feature is also essential to consider as it will trip the power supply when the pre-set temperature is reached. Hence, this is an ideal feature that would help you save a lot of energy and reduce your utility bill.
- **Size-** You need to check on the compactness of the room heater if you are planning on using it on different rooms as per your convenience. Almost all **best room heaters in India** are

manufactured with portability factor in mind. So, check for this feature before you make your decision to purchase.

Safety Tips to Consider While Using Room Heaters

Even though all the **best room heaters in India** are equipped with safety measures. But still, you need to keep in mind some of the safety tips to ensure that no accidents happen while you are using them. The safety tips include:

- Do not keep any object nearby that has the risk of catching fire. Some of the common materials that you must keep away from the room heaters include paper, blankets, furniture, bedding and others. Even if you are buying the **best electric room heater** with all safety measures embedded, you still need to keep away the inflammable objects.
- Go for a timely check on your room heater's internal condition. Keep it clean and always repaired to ensure no occurrence of fault during the time of use.
- Always place the room heaters on a non-inflammable surface such as cement floor or others. Avoid placing it on carpets or furniture as it might damage your property.
- Do not place the room heater in the area where people are moving in and out frequently.
- The room heaters are not meant for cooking food or drying clothes as they are meant only for providing supplemental heat to the room for making it warm and comfortable during the winters. Using it for other applications would eventually put more load on the heater as well as consume more energy.
- Remember to turn off the room heater whenever not in use.
- Keep the pets and kids away from the room heaters to prevent accidents.

Conclusion

So, you are now aware of the eight **best room heaters in India** that are provided by the top brands to help meet your needs and requirements. Following that, you can also go through the buying guide to help you choose the best product that fits your requirements and budget.

As the winters are kicking in, it is high time you must get the **best room heater with low power consumption** to avail a peaceful sleep time.
